Innovative Supplement To WLD Ecology

## —— Integration Of ATM Altman Coins And Worldchat app

The introduction of ATM tokens is an important addition to the Unconditional Basic Income (UBI) scheme in the WLD ecosystem. This innovative initiative aims to use the advanced ChatGPT voice big data technology to authenticate and register users through the Worldchat app to ensure that participants are real humans. This process not only enhances the user identity verification process, but also encourages active user participation by providing a stipend in ATM tokens.

In addition, the issuance of ATM tokens effectively solves the problem of WLD iris scanning technology being difficult to cover in some countries, and at the same time meets the needs of user groups in regions that do not support iris technology. Through this inclusive approach, the WLD ecosystem is able to expand its global influence while providing users with more diversified services and wider access points.

The launch of Worldchat app heralds a new era of communication. It not only improves the security and convenience of user registration, but also promotes the growth and activity of the user community through the incentive mechanism of ATM tokens. As more and more users join the WLD ecosystem, ATM tokens are expected to become an important bridge connecting different countries and cultures.
